

Solution Brief

Aruba Instant On

Run your business remotely.

We've witnessed it firsthand. The way we do business can change just like that. One day, it's another day at the office. The next, we're recalibrating from the comfort of our home. Running a business is challenging enough as is. Now, you've got to go remote. Collaboration tools. Voice and video conferencing. Cloud-based apps. All of these need to be top of mind—on top of everything else.

Aruba Instant On is made for the remote. Aruba Instant On is fast, reliable, and secure Wi-Fi. Stay connected with a cost-effective solution that sets up in minutes. Run your business without skipping a beat.

Be up and running in minutes.

Our opinion? The best technology makes life easier. That's the guiding principle behind Instant On. Simply plug it in to your router or gateway. Then, download and access the Aruba Instant On app on Android or iOS. We'll guide you from there. No technical expertise needed. Promise.

Stay connected anywhere in your home.

Want to win while working remote? A fast, reliable connection from anywhere in your home is a must. Rest assured, Aruba Instant On has lightning-speed connectivity on lockdown. But Instant On is more than just fast. It's extensive. With extended wireless coverage and Smart Mesh technology, no dead zone is going to stop you from getting the job done.

Extend the range of your network.

Want to cover multiple rooms and living areas? Walls or barriers blocking the connection you want? We can give you the range you need. Aruba Instant On allows you to extend your network wirelessly with ease—no cables needed. Simply place another Instant On access point in the room you'll be working in. Then, use the Instant On app to add it to your network. Connection = extended.

Keep your devices and your business secure.

More devices = more problems. It's near impossible to keep them up-to-date with the latest security standards. Plus, vulnerable computers on your home network can pose serious risks to remote business operations. With just a push of a button, Instant On can create a completely separate network for your business devices, protecting them from the hazards at home.

Always on, always accessible.

Have you ever had to reboot your router in order to get your connection back up? You won't have to with Instant On. By design, we're literally always on. We're also always accessible, too. With the mobile app, you'll have constant access to the devices on your network. Troubleshooting and improving performance has never been this simple.
